

I Problem Definition

Fragmented Information

Users must juggle multiple platforms/apps to compare different cinema schedules.

Inconvenient Comparison

No central system exists to view showtimes and promotions across various brands simultaneously.

Manual & Time-Consuming

Booking is inefficient due to separate searches for movies, seat availability, and discounts.

Poor User Experience

Lack of integration leads to user frustration and a slow, disjointed booking process.

Objectives

Unified Platform

Consolidate multiple cinema brands into a single, integrated application.

Real-Time Visibility

Enable users to check all movie showtimes and seat availability in one place.

All-in-One Features

Integrate seat selection and promotion viewing within the same transaction flow.

Objectives

Streamlined Experience

Deliver a fast, convenient, and user-friendly interface to enhance the booking journey.

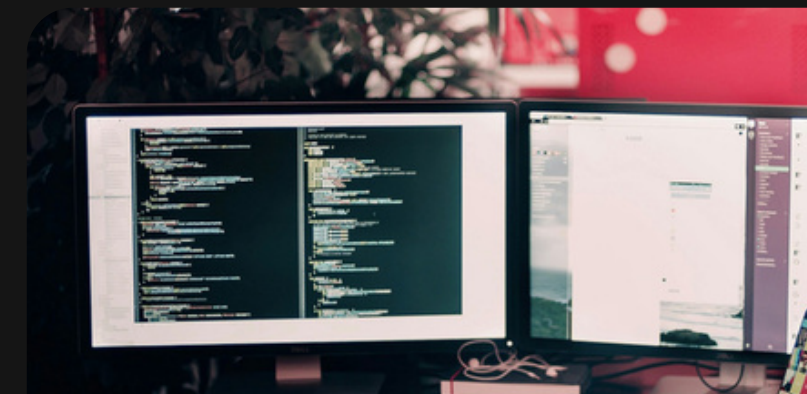

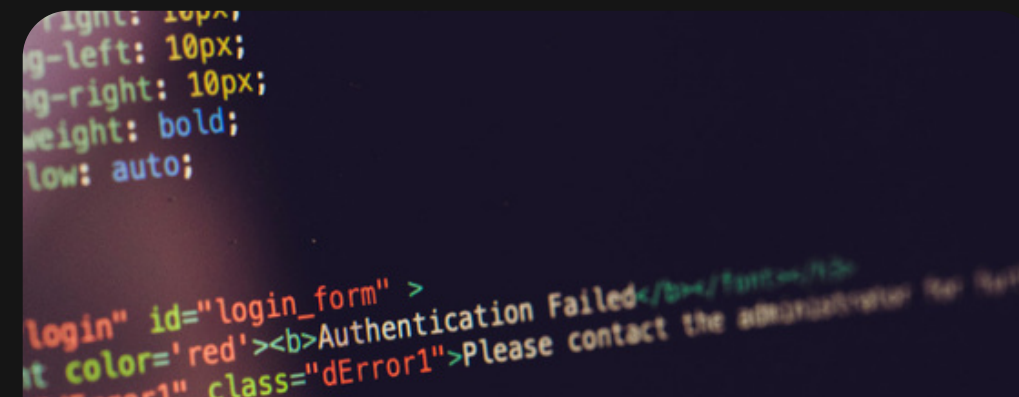

Efficiency Gains

Significantly reduce the time and effort required for users to secure their movie tickets.

Software Architecture

#1 Movie Ticket App

The Movie Ticket App utilizes a client-server model structured around a three-tier architecture: the presentation layer, the application layer, and the data layer.

III Software Architecture

#2 Presentation Layer (Client)

– Rather than just a Figma design, the user interface is a functional Mobile App built with HTML, CSS, and JS. It acts as the client, enabling users to engage with the system and communicating over the Internet via HTTP.

#3 Application Layer (Web Server)

– Application Layer (Web Server): Hosted on Server 1, a Node.js web server receives these HTTP requests and manages core business functions like ticket booking, seat choice, and payment handling.

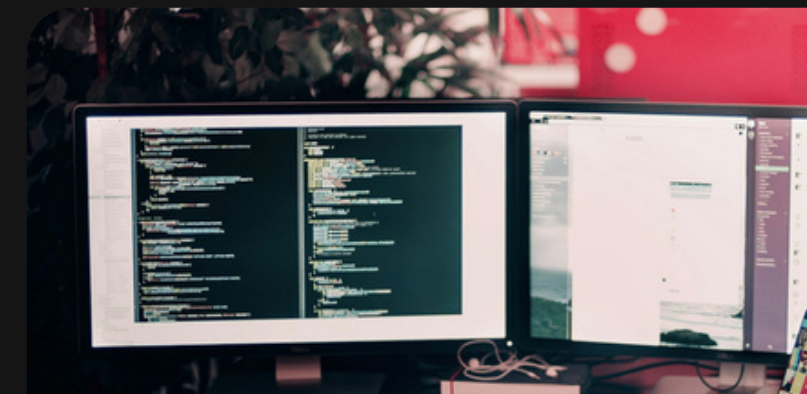

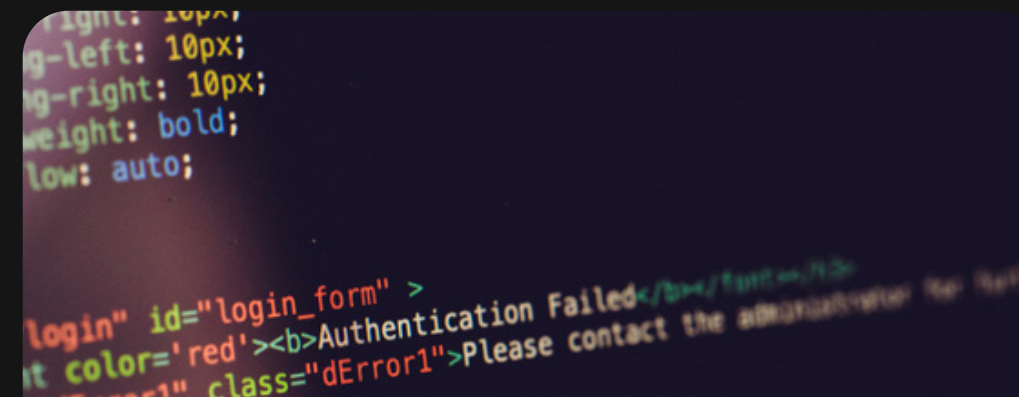

#4 Data Layer (Database)

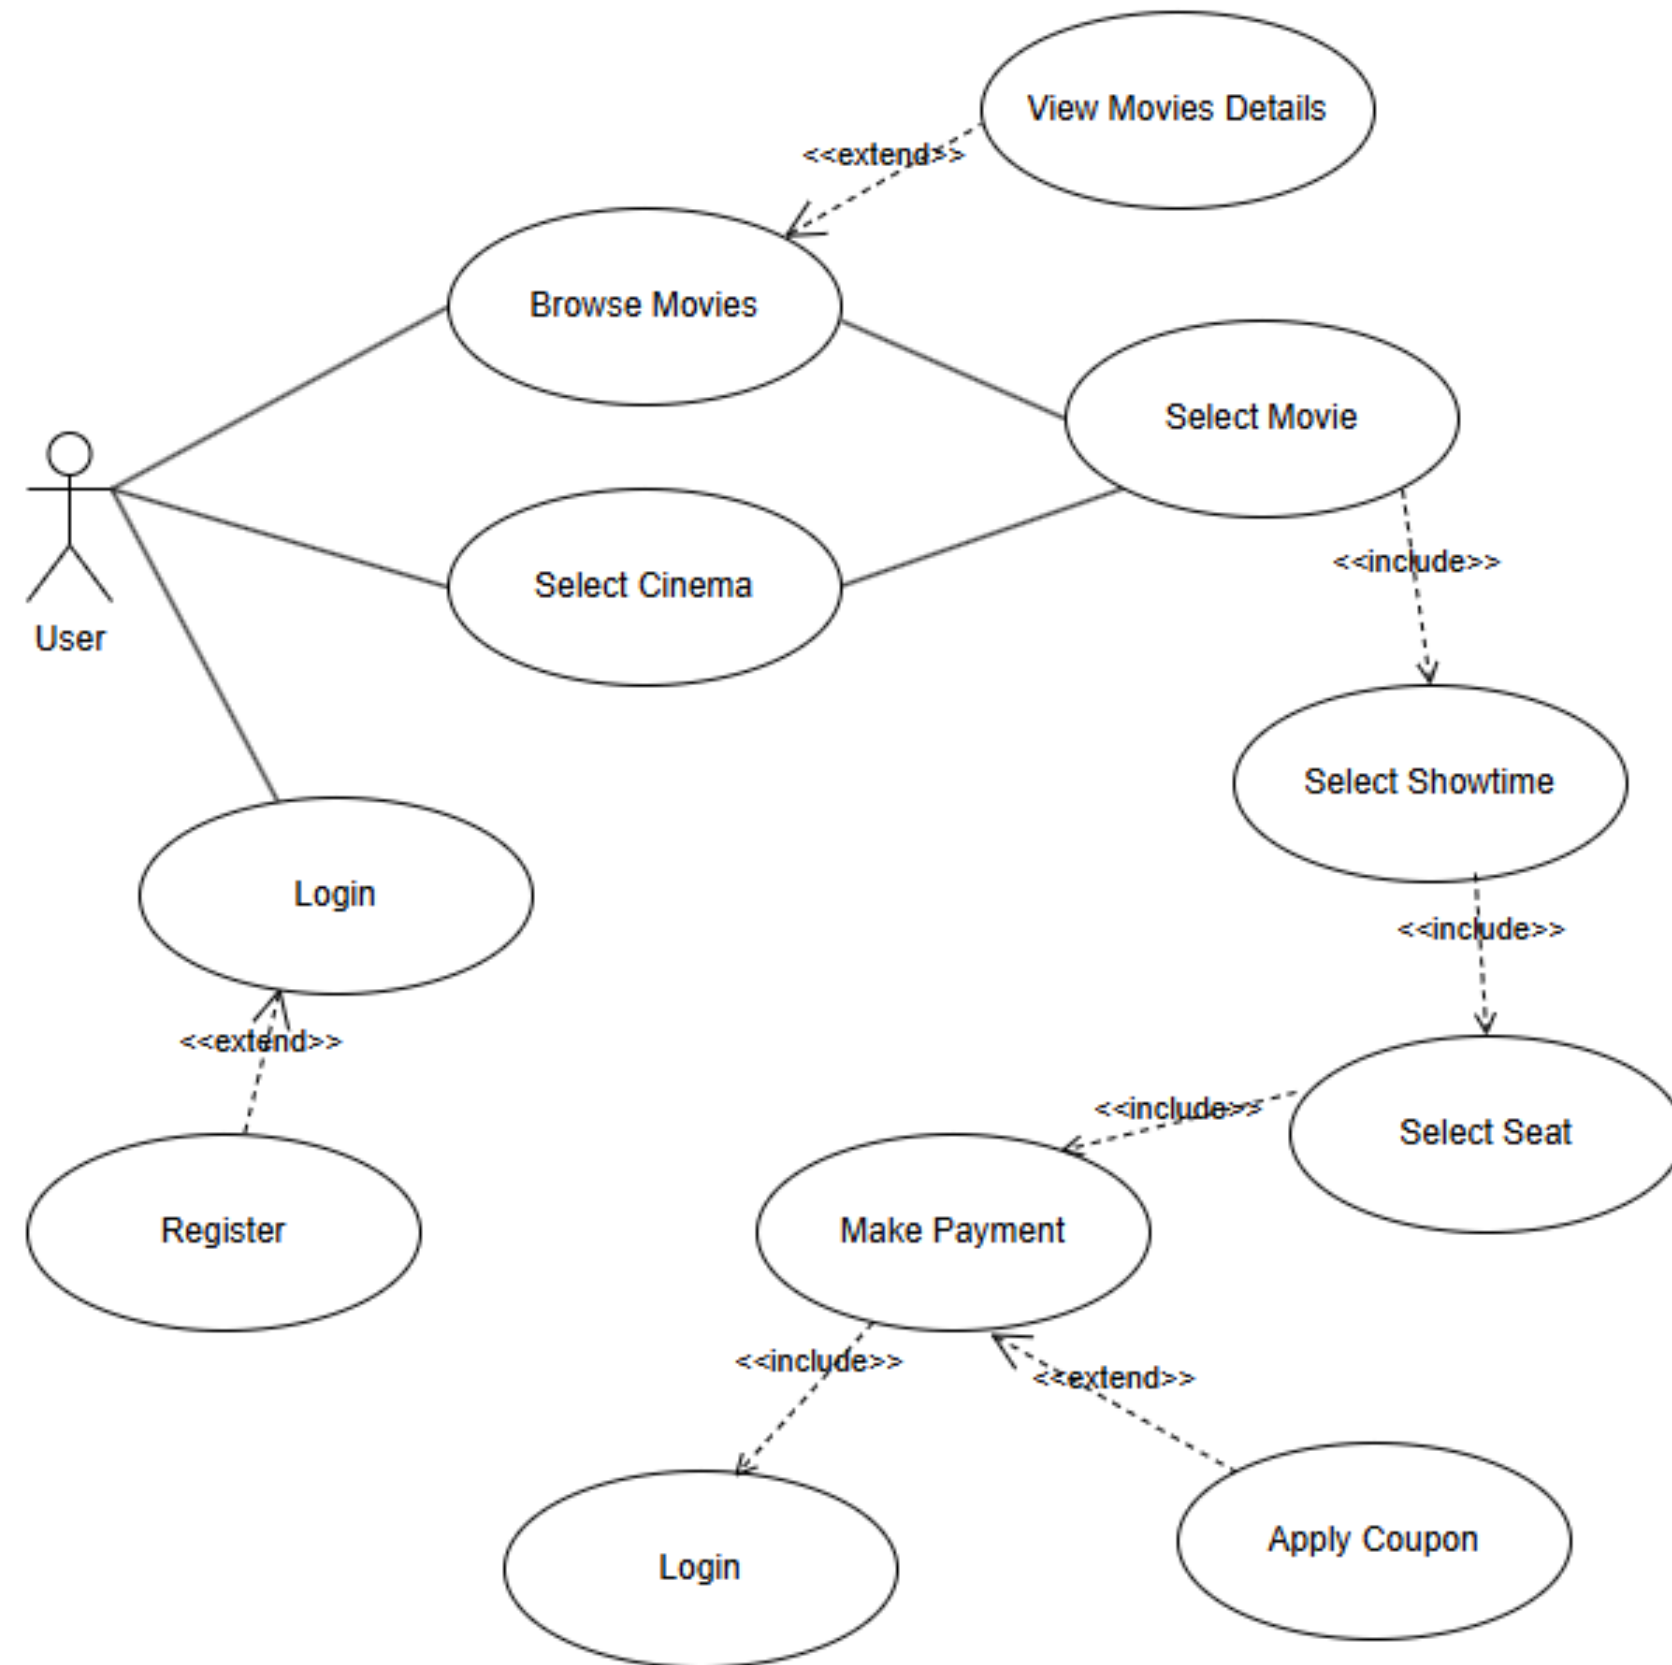

- Hosted on Server 2, a MySQL database receives SQL queries from the Node.js server to oversee and maintain details about users, films, reservations, and transactions.

🔍 Test case

Log In

	Test Case	Test Data	Expected Result	Program Result	Note
Valid	Correct Credentials	user@email.com, Pass123	Success (Login)	Success (Login)	Pass
Valid	Unregistered Email	new@email.com, Pass123	Error message	Error message	Pass
Invalid	Incorrect Password	user@email.com, Wrong123	Error message	Error message	Pass
Invalid	SQL Injection attempt	' OR 1=1 --, 123	Reject	Reject	Pass
Invalid	Null / Empty fields	Null, Null	Reject	Success (Login)	Not Pass

Select Location

	Test Case	Test Data	Expected Result	Program Result	Note
Valid	Exact match	Central Salaya	Shows "SF CINEMA Central Salaya"	Shows "SF CINEMA Central Salaya"	Pass
Valid	Partial match	Central	Shows all "Central" branches	Shows all "Central" branches	Pass
Invalid	Non-existent location	Mars Cinema	Shows "No results found"	Shows "No results found"	Pass
Invalid	Special characters	!@#\$%^	Shows "No results found"	App Crashes	Not Pass
Invalid	Null / Empty search	Null	Shows default/nearest list	Shows default/nearest list	Pass

Coupon

	Test Case	Test Data	Expected Result	Program Result	Note
Valid	Valid Code	MOVIE50	Price reduced by 50	Price reduced by 50	Pass
Invalid	Expired Code	OLD2023	Error: "Coupon expired"	Error: "Coupon expired"	Pass
Invalid	Invalid Code / Typos	M0V1E50	Error: "Invalid code"	Error: "Invalid code"	Pass
Invalid	Special Characters	@@@!!!	Reject	Reject	Pass
Invalid	Null / Empty	Null	Reject / Button disabled	Reject / Button disabled	Pass

Payment

	Test Case	Test Data	Expected Result	Program Result	Note
Valid	Valid Card Details	Expiry:12/26, CVC:123	Success (Proceeds)	Success (Proceeds)	Pass
Invalid	Expired Date	Expiry:01/20, CVC:123	Error: "Card expired"	Error: "Card expired"	Pass
Invalid	Incomplete CVC	Expiry:12/26, CVC:12	Reject / Validation Error	Reject / Validation Error	Pass
Invalid	Letters in number fields	Expiry:AB/CD, CVC:ABC	Reject input	Accepts input	Not Pass
Invalid	Null fields	Null, Null	Reject	Reject	Pass
